Burckhardt Compression wins major order for LNG Terminal in Brunsbüttel, Germany, supporting energy security and transition

Winterthur, Switzerland – Burckhardt Compression, a leader in reciprocating compressors, has been selected to supply critical Boil-off Gas (BOG) and Pipeline injection compressors (MSO) for a new LNG regasification terminal in Brunsbüttel, Germany. This terminal will play a vital role in securing a stable supply of liquefied natural gas (LNG) for Germany, with regular operations expected to start in 2027.

The new Brunsbüttel terminal aligns with Germany's national strategy to enhance energy security and reduce reliance on coal and nuclear power. Burckhardt Compression's BOG and pipeline injection compressors will ensure safe and efficient LNG handling and injection into Germany's national gas network.

"For this project, we chose Burckhardt Compression because of their extensive experience with LNG BOG management compressors, the high operational flexibility of their machines, and their proven track record with LNG terminal installations in Europe." states German LNG Terminal.

This contract underlines Burckhardt Compression's commitment to global energy security and highlights the Company's role in advancing sustainable energy solutions for the future. The LNG sector is projected to grow significantly in the coming years, with traded volumes expected to increase by more than 50% by 2040.

Supporting reliable LNG supply chains efficiency

The LNG supply chain encompasses several critical steps, incl. gas purification, liquefaction, transportation, regasification, and distribution. As global demand for LNG continues to rise, terminals are transforming into multifaceted hubs.

Burckhardt Compression's specially designed compressors, including gas tight Laby® compressor, offer robust solutions with maximum operational flexibility for handling BOG operations. Over the years, the Laby® compressor has set the benchmark for reliability and low lifecycle costs. It remains the most preferred compressor type on the market for oil-free compression duties, particularly for cryogenic liquid gas storage applications.

About Burckhardt Compression

Burckhardt Compression creates leading compression solutions for a sustainable energy future and the long-term success of its customers. Together with its brands Burckhardt Compression, PROGNOST, SAMR Métal Rouge and Shenyang Yuanda Compressor, the Group is the only global manufacturer that covers a full range of reciprocating compressor technologies and services. Its customized and modularized compressor systems are used in the Chemical/Petrochemical, Gas Transport & Storage, Hydrogen Mobility & Energy and Industrial Gas sectors as well as for applications in Refinery and Gas Gathering & Processing. Since 1844, its passionate, customer-oriented and solution-driven workforce has set the benchmark in the gas compression industry.
